

RECOMMENDED BUILD SEQUENCE

1. Fuselage - lower rear fuselage has a sharp edge, lower front is slightly rounded.
2. Horizontal and vertical tail - attach to fuselage.
3. Wing - attach to fuselage - glue top fuselage decking over wing.
4. Stuff fuselage with tissue paper to retain shape.
5. Wing struts and auxiliary struts. Note that there are no locating lugs for the auxiliary struts, to allow for small building inaccuracies.
6. Windscreen - shape carefully (no sharp edges anywhere) - top edge covers wing leading edge.
7. Engine cowling : main part first, then front, then lower part. Lower part shape transitions from front (follows front part outline) to rear (almost flat).
8. Propellor and spinner
9. Undercarriage. Main struts attach to side of fuselage, auxiliary struts attach underneath fuselage.
