

RECOMMENDED BUILD SEQUENCE :

1. Fuselage - remember to cut slots for the main undercarriage leg first.
2. Wing spar - insert in fuselage underneath cockpit area.
3. Wings - shape aerofoil section carefully so that wingtip endplate tucks in nicely.
4. Slide wings over wing spar and glue bottom to fuselage - cover top with wing-to-fuselage joiner.
5. Attach wing struts, add windscreen, slide main undercarriage leg through fuselage (before shaping leg).
6. Build horizontal tail surfaces and mount to fuselage. Note that top surface is almost flat !
7. Attach rudder and dorsal fin.
8. Carefully shape slats and attach to wing leading edge using one of the 2 mounting methods.
9. Attach ailerons/flaps underneath wing.
10. Finishing touches : engine cowl, propellor and spinner, nose gear.

CONGRATULATIONS !
